FINE SCIENCE TOOLS

2026

100 % Satisfaction Guarantee 満足度100 %への“挑戦”

FST(FINE SCIENCE TOOLS INC.)社及び室町機械(株)は満足度**100%**を実現すべくお客様の立場に立ったサービスを心掛けております。

- 実際に製品を見てから購入可能な『貸出サービス』を提供しております。
 - 購入された商品に不具合がある場合、交換させていただきます。
 - FST社製品の『研磨・修理サービス』も行っております。
(ピンセットは研磨・修理しても元の状態に戻すことは難しい為、買い替えをお薦めしております)
- 本カタログ記載の器具は全て動物実験用であり、臨床にはご使用になれません。

Most FST® instruments are made from Surgical Stainless Steel alloys with supreme German quality standards and premier craftsmanship. Most surgical instruments are shown in actual size. As these instruments are handcrafted, dimensions may vary slightly from those stated in this catalog.

The information in this catalog is accurate to the best of our knowledge. Designs, styles and dimensions depicted in this catalog are subject to change without notice. All recommendations or suggestions are made without guarantee, and we disclaim any liability incurred in connection with any recommendation. With the purchase of any product from this catalog the user assumes all risks and liabilities whatsoever in the use of such products. Neither seller nor manufacturer shall be liable in tort or contract for any loss or damage (direct, incidental, or consequential) arising out of the use, misuse, or inability to use such product.

LETTER FROM THE OWNER

Dear Valued Customers, Partners, and Friends,

As we celebrate our 51st year of precision, passion, and purpose, we extend our deepest gratitude to you; our valued partners, clients, and colleagues – who all are an integral part of this remarkable journey. From our humble beginnings to our global presence today, one thing has never changed: our unwavering commitment to quality, service, support, and innovation.

Behind every catalog page is a dedicated team that truly cares – not just about instruments, but about the people who use them. Whether you're a long-time customer or opening our catalog for the first time, we are here to guide you, collaborate with you, and deliver an experience rooted in trust, quality, and care.

This year, we are proud to unveil our theme: Smallville – a tribute to our unwavering attention to detail and profound commitment to craftsmanship. It serves as a powerful and imaginative symbol of the qualities that define us. Just as each miniature figure is meticulously crafting every cutting

edge, every curve, every tip and mechanism reflects the heart and soul we pour into our instruments. Every element matters and every customer deserves nothing less than excellence.

This commitment to precision extends beyond our instruments, it is also embedded in every aspect of our processes, on how best to serve you. We at Fine Science Tools (FST®) are always looking for smarter, more sustainable ways to help our community. We are actively rethinking materials, refining production processes, and protecting the health of our planet alongside the health of everyone. We are making conscious efforts at FST and every decision we make today considers the needs of tomorrow. Thank you for being a part of our story. Here's to the next chapter – built on precision, shaped by innovation, and guided by values that never go out of style.

Warmest regards, Markus Gawenda

TIMELINE

FST® SINCE 1974

For more than 50 years, Fine Science Tools has been the leading distributor of precision surgical and microsurgical instruments, as well as laboratory accessories with offices in Foster City (USA), Heidelberg (Germany) and Hong Kong (China) supporting and serving customers across the globe.

1974

FST is established by Hans Gawenda in North Vancouver B.C., Canada

1996

FST invents and launches the first and only available 0.5 mm Cup Rongeur

1984

FST opens a business office in Foster City, California, USA

1993

FST opens a business office in Heidelberg, Germany

1999

The unveiling of our annual marketing campaign reflects our passion and excitement for innovation and creativity year after year. FST® catalog covers and print Ads have won over 22 awards and are well known within the research community.

EXCLUSIVE LINE

BONN-GAWENDA SCISSORS

Our Exclusive Line was released on our 50th Anniversary, these instruments are meticulously crafted to support every aspect of your research needs. At the heart of this collection is the Bonn-Gawenda Scissors, created as a tribute to our founder, Hans Gawenda, and symbolizing our legacy of innovation and excellence. These scissors stand out for their advanced design and exceptional craftsmanship, reflecting the high standards that have always defined our work.

The ToughCut® technology incorporates one micro-serrated cutting edge paired with a razor-sharp blade, delivering consistently clean and precise cuts. These scissors have perfect tips for precision work under a microscope. Designed with comfort and ergonomics in mind, the large finger loops and specially engineered handle ensure exceptional control throughout each use.

Cutting Edge: 10 mm
Microscopically fine tips

Length: 10.5 cm

CATALOG FEATURES

PRODUCT FEATURES

To provide you with our support regarding your decisions in finding the right instruments for your purpose, the product feature details are explained below.

ICONS

The Exclusive Line offers a unique combination of popular features of our tools combined into one. Whether you're seeking elegance, stability and ergonomics, or versatile functionality, the Exclusive Line is specially designed to cater to every facet of your needs.

Fine Science Tools has noted which items are most frequently purchased for use in a variety of surgical procedures. To find our most popular items, look for the "most popular" icon throughout the catalog.

Our yearly selection of new instruments is based on a careful study and knowledge of our customer needs, as well as listening to their requests.

The tips have micro serrations to ensure a better grip on tissue or other materials.

Fine Science Tools is proud to offer a large selection of left-handed surgical instruments to our community. To find our left-handed instruments in this catalog, look for the "left-handed" icon on the pages below.

FST® features a selection of scissors with larger than normal finger loops. Most of these loops are easily adjustable to fit larger fingers more comfortably. To find our large loop scissors please look for the "large loop" icon on the pages below.

These items are not suitable to autoclave, but can be sterilized by a different method. For example: hot bead sterilization, gas sterilization, plasma sterilization or hot air sterilization. Please contact us to receive more information regarding the best preferred method for your instruments.

Scissors: pages 38, 49
Hemostatic Forceps: page 117
Needle Holders: pages 150 - 151
Ligation Aid: page 128

Scissors: pages 35, 39, 48 and 51

Fine Science Tools offers a wide selection of the latest and most popular Dumont forceps. Handcrafted in Switzerland for more than a century, these forceps are known for their consistent and uncompromised fineness.

Dumont forceps come in an array of styles and alloys. Below you will find detailed descriptions to help guide you in choosing the right Dumont forceps best suited for your needs.

FINDING THE DUMONT FORCEPS BEST SUITED FOR YOUR NEEDS

Alloys	Hardness	Magnetic	Temperature resistance	Autoclavable	Advantages
Titanium	Least Hard	No	Up to 430 °C	Yes	Resistant to corrosion from nitric acid, chloride, and salt water. Titanium is 40% lighter than Surgical Stainless Steel.
Dumoxel	Hard	No	400 °C	Yes	The most popular alloy available for Dumont forceps offers the high resistance to corrosion, sulphuric environments, hydrochloric acids, and all other mineral and organic acids.
Inox	Harder	Yes	400 °C	Yes	Available for most Dumont forceps. Contains chromium added to carbon steel, which results in some loss of hardness but offers good stainless qualities and resistance to corrosion.
Dumostar	Harder	No	500 °C	Yes	More durable and corrosion resistant than the best Surgical Stainless Steel. Highly resistant to mineral and organic acids, and salt water. Dumostar lasts an average of four times longer than Dumoxel and Inox. Most cost effective alloy for laboratory use.
Carbon	Hardest	Yes	N/A	No	Extremely hard; ensuring strong tips. Easily stains and rusts without proper care. Carbon cannot be immersed in a water bath or sterilized.

Tip profiles: Dimensions vary. See each style for specific dimensions (width x thickness).

Standard	Made for high precision and consistently precise work under a microscope.
Biology	Twice as fine as "Standard Tips". Especially produced for high precision laboratory work under the microscope.
Super Fine Tips	Four times finer than the "Standard Tips". These tips are extremely delicate for the finest work under the microscope. Extra care is needed for these tips as they are very fragile.

Styles

#2	Straight forceps with wide yet fine tips, referred to as Mouse Laminectomy Forceps because of their popularity in breaking off delicate bone from mouse skulls.	#5XL	Extra Long #5 forceps.
#2AP	Epoxy coated with flat wide blunt tips.	#5/45	Tips angled at 45°.
#3	Long straight forceps with coarse tips. Popular in low magnification procedures.	#5/45C	Designed to pick up cover slips from multi-well plates.
#3C	Shorter version of #3.	#5/90	Tips angled at 90°.
#4	Similar to the #5 but with broader shanks and stronger tips.	#5AC	Self-closing Anti-Capillary forceps.
#5	Most popular style of Dumont straight forceps with fine tips which come in several styles.	#6	Sharply angled, broad tips.
#55	Similar to the #5 but with lighter shanks, giving the forceps a lighter spring action.	#7	Most popular style of Dumont curved forceps with fine tips which come in several styles.
#5CO	Similar to the #55 but with even finer shanks producing the lightest spring action and longest meeting surface of any Dumont style.	#7B	Curved serrated tips.
#5L	Medical #5 forceps with slide sleeve for a secure hold and retention.	AA	Strong broad tips.
#5SF	The finest tips ever produced by Dumont.	M	Mini forceps.
		Medical	Denotes distinctive ribbed handle to maximize grip.
		SS	Long and narrow shanks with thin tips.
		WA	One piece design with no soldering grooves allows the forceps to be thoroughly and easily cleaned preventing biofilm residue.

PRECISION THAT MAKES A MARK

HANDCRAFTED

Our highly skilled and experienced surgical mechanics refine and perfect our instruments in Fine Science Tools' very own workshop, a step that only we take in this manner. This is crucial for the precision and consistent quality of our products. For example, our Friedmann-Pearson rongeurs with a tip diameter of 0.5 or 0.7 mm are unique in the world.

Our spring scissors have also established themselves in the research industry and are unsurpassed in their fineness. The result: a level of quality to be proud of – and to which we have now committed ourselves to. Our "Handcrafted" symbol stands for 100% guaranteed craftsmanship and instruments that you can rely on today, tomorrow, and always.

CUSTOM DESIGN

Whether you are seeking a personalized, one-of-a-kind instrument tailored to your specific requirements or interested in building a specialized application kit, we have the expertise and resources to deliver. Through our extensive network of expert partners and collaborations with leading institutions and companies, we offer custom-

manufactured instruments, carefully curated instrument kits, and co-branded sets designed for collaborative projects. Additionally, we provide special modifications to our existing products, ensuring a perfect fit for your unique applications. Interested? Get in touch with one of our offices – we're happy to assist you!

QUALITY CONTROL

The exceptional quality of our surgical and microsurgical instruments is a direct result of our relentless commitment to detail and craftsmanship. Nearly every instrument we offer is meticulously crafted by skilled European artisans and engineered to exacting specifications. We use only premium Surgical Stainless Steel and subject each instrument to rigorous testing

to ensure outstanding precision, durability, and ergonomic performance. We proudly uphold Supreme German Quality Standards. At our office in Germany, experienced technicians conduct thorough inspections of our instruments.

Every detail is carefully evaluated – from tip sharpness and cutting edges to springs, joints, and overall construction.

SCISSORS TEST

Does paying more for a pair of scissors really buy more value and a longer cutting life?

The picture shows our cutting test for ring scissors based on the standards and specifications of surgical instruments in our office in Heidelberg. Each pair of scissors must perform a smooth cut without tearing or fraying the material, specifically at the fine tips. In addition, a specialized long-term test is done to identify the longevity of other featured alloys and cutting edges, Tungsten Carbide

and ToughCut®. In this test the scissors will repeatedly cut through a continuous feed of cotton cloth and a counter keeps track of the number of cuts made to evaluate when the scissors begin to show a decrease in cutting quality.

The results showcase the addition of added features dramatically increases the cutting life of the scissors. Most notably, the cutting life is more than doubled with the addition of ToughCut® blades and over six times longer with our CeramaCut® feature.

OUR RANGE OF SERVICES

50 YEARS OF EXPERIENCE

Leading distributor of of surgical and microsurgical instruments

100% SATISFACTION GUARANTEE

Full refund, if you're not satisfied

PRODUCT AVAILABILITY

Extensive stock ensures fast delivery times

FAST DELIVERY TIMES

2-3 days in Europe & America, 5-7 days worldwide

TECHNICAL PRODUCT CONSULTATION

“ IF YOU ARE NOT COMPLETELY SATISFIED WITH YOUR PURCHASE, YOU MAY RETURN IT FOR A FULL REFUND. ”

Hans Gawenda, Founder
Fine Science Tools Inc.

SHARPENING & REPAIR

In our very own workshop in Heidelberg, Germany we not only manufacture and customize specific instruments according to customer requirements, but also offer a repair service.

- General repairs
- Sharpening
- Adjustments & corrections
- Cleaning & reconditioning
- Replacements
- Special requests & custom corrections

Our specialized sharpening service offers the highest quality and reliability to restore the original sharpness and functionality of the instrument.

Each blade undergoes a thorough inspection for wear, cracks, and other irregularities before sharpening. It is then precisely ground to the optimal angle to ensure superior cutting performance.

With our extensive expertise, we ensure your instruments are repaired with the highest precision, maximizing their longevity and efficiency.

Each instrument is carefully checked for damage, wear and functionality, followed by a quality check after repair. Our team is also available for repairs of your instruments which have not been purchased from FST®.

For do-it-yourself sharpening, we offer a kit (page 171), which includes a sharpening stone, O-rings, a bottle of instrument oil (50 ml) and a pair of flat nose pliers.

ALLOYS & MATERIALS

There are various special alloys and materials with advanced features, that are used to produce surgical and microsurgical instruments with each having certain properties that would be advantageous in particular

environments or applications. We will introduce these alloys and materials, describe their benefits and highlight unique tools that may be ergonomic and overall helpful for your studies and/or protocols.

ToughCut® Scissors

- Identified by black finger rings
- Last approx. 2.3x longer than Surgical Stainless Steel
- One cutting edge has micro serrations to minimize tissue slippage
- The other cutting edge has increased sharpness
- Available as ring and spring scissors

Tungsten Carbide Instruments

- Identified by short gold-plated handles
- Last approx. 1.9x longer than Surgical Stainless Steel
- Reinforced with tungsten carbide for enhanced durability
- One of the hardest alloys available
- Available instruments: scissors, forceps, needles, needle holders and burrs

Surgical Stainless Steel

- Used for most of our instruments
- High alloyed Surgical Stainless Steel (min. 12% chromium)
- Corrosion resistance
- Sterilizable in various ways

CeramaCut® Scissors

- Identified by long gold-plated finger rings and a black coating
- Combine Tungsten Carbide and ToughCut® cutting edges with a ceramic coating
- Last approx. 6.6x longer than Surgical Stainless Steel
- Reduced glare
- Reduced surface tension for cleaner cuts
- Increased corrosion resistance

Tungsten Carbide & ToughCut® Scissors

- Identified by long gold-plated finger rings
- Last approx. 4.1x longer than Surgical Stainless Steel
- Cutting edges reinforced with tungsten carbide for enhanced durability
- One cutting edge has micro serrations to minimize tissue slippage
- The other cutting edge has increased sharpness

Titanium Instruments

- Approx. 40% lighter than Surgical Stainless Steel
- Softer alloy than Surgical Stainless Steel
- Corrosion resistance (cannot rust)
- 100% non-magnetic
- Available instruments: spring scissors, forceps, probes, hooks, spatula and vascular clamps

Ceramic coated Instruments

- Identified by full black colour
- Last approx. 2.3x longer than Surgical Stainless Steel
- Increased corrosion resistance
- Reduced glare
- High slide capacity of ceramic reduces surface tension for cleaner cuts
- Available instruments: Dumont forceps, scissors

Learn more about
our Alloys & Materials

MAINTENANCE & CARE

Proper care of your surgical instruments will improve their longevity and function. Below are different cleaning, sterilization, and maintenance processes to guide you through your techniques.

- Clean and thoroughly dry your instruments as soon as possible after each use, paying special attention to joints, hinges, and anywhere there is metal to metal contact.
- Ensure that all organic material residues are completely removed.
- Handle your instruments delicately and with care.
- Use your instruments for their intended purpose.
- Store your instruments with tip protectors, and always place them so that they do not touch each other.

CLEANING

Fine surgical instruments should be cleaned immediately after use. Blood or saline solutions left on instruments for any length of time can quickly start corrosive action. Time, temperature, and agitation play important roles in the cleaning process. Time affects the efficiency of cleaning solutions as most are effective after a certain time period. Higher temperature cleaning solutions result in better cleaning. During manual or ultrasonic cleaning it is helpful to loosen any surgical residue. Before any of the procedures below, rinse your instruments under warm running water to remove all blood and tissue. Instruments can be cleaned manually or ultrasonically, but always:

- Use a neutral pH (pH7) cleaning solution.
- Clean instruments in the open position to ensure a thorough and effective cleaning process.
- Use soft textile or paper cloths, soft plastic brushes made of nylon, or water spray bottle.
- ⚠ • Do NOT use steel wool, wire brushes, or scouring pads as these are abrasive to the instruments.

MANUAL CLEANING

- Make sure all instruments are visibly clean and free from stains, wiping them carefully to remove all blood and tissue matter.
- Rinse instruments thoroughly with distilled water, paying close attention to joints and hinges as these areas can accumulate unwanted material.
- Air dry your instruments completely and use a can of compressed air to blow out any water at the joints and hinges. Then store them only in clean and dry environments.

ULTRASONIC CLEANING

Ultrasonic cleaning is the most effective cleaning method. The vibrating sound waves create micron-sized bubbles in the solution that grow with the alternating pressure. When the bubbles reach a particular size, they collapse creating a force that dislodges dirt and particles, even in the smallest of crevices.

- ⚠ • NOT recommended for delicate and micro instruments.
- Follow the manufacturer's guidelines for specific instructions and cleaning cycle times.
- Instruments should be processed for the full recommended cycle time.
- Place instruments in the open position in the ultrasonic cleaner.
- ⚠ • Do NOT allow instruments with sharp blades to touch other instruments.
- ⚠ • Do NOT place dissimilar metals (stainless, copper, chrome plated) in the same cleaning cycle.
- Make sure all instruments are completely submerged.
- After the ultrasonic cleaning cycle is complete, rinse instruments thoroughly to remove all ultrasonic cleaning solution.
- Dry instruments thoroughly with a clean towel.
- Use a spray lubricant in the hinges to minimize the risk of corrosion and maintain functionality.

STEAM STERILIZATION/AUTOCCLAVING

The autoclave process utilizes moist heat (or steam) under pressure for sterilization. The steam used must be from distilled water and free of all impurities.

- ⚠ • Lubricate all instruments that have any metal to metal interaction such as; scissors, rongeurs, needle holders, hemostats, and retractors. Do NOT use WD-40 or other industrial lubricants.
- Instruments may be autoclaved individually or in sets.
 - Individual instruments: Disposable wraps or sterilization pouches are ideal. Make sure the pouch size is sufficient for the instrument to be in an open (unlocked) position.
 - Instrument sets: Open and unlock all instruments. Place the heavier instruments on the bottom of the set when two layers are needed.
- ⚠ • Do NOT lock instruments during autoclaving. This will prevent the steam from reaching and sterilizing the metal to metal surfaces, and heat expansion during autoclaving can cause cracks in the hinge areas.
- ⚠ • Do NOT over load the autoclave chamber as this may hinder steam penetration.
- Place a towel on the bottom of the pan to absorb excess moisture during autoclaving. Make sure the towel has no detergent residue and is pH neutral if immersed in water.
- At the end of the autoclave cycle (before the drying cycle) unlock the autoclave door and open it slightly. Run the dry cycle for the recommended time period by the autoclave manufacturer.

Please note: If the autoclave door is fully opened before the drying cycle, cold air will rush into the chamber, which can cause condensation on the instruments. This will result in water stains on the instruments.

HOT BEAD STERILIZATION

Recommended for speed and convenience when instrument tips or blade sterilization is required. The Hot Bead Sterilizer does not use dangerous gases, flames, or chemicals. Highlights:

- Bench top set up.
- Only 20 seconds of contact required to ensure your instruments are free of pathogens and microbial contaminants.
- Beads reach temperature of 240–270 °C (464–518 °F) within 15–20 minutes heating time.

Please see page 174–175 for more information on the FST® Hot Bead Sterilizers.

ETHYLENE OXIDE (ETO) STERILIZATION

This method is recommended for instruments that will not tolerate high temperatures or moisture (e.g., catheters, cannulae, etc.). This is a process consisting of 4 primary variables; gas concentration, humidity, temperature and time.

Wraps available, see page 176

STORAGE

Surgical instruments should be properly stored in a clean and dry environment. It is highly recommended to use tip protectors and instrument cases to avoid possible damage to your instruments.

Instrument tip protectors are available, see page 182

Instrument cases are available, see pages 178–181

OXIDATION (RUST)

All FST® Surgical Stainless Steel instruments are manufactured from medical grade Stainless Steel under strict European standards. It is very important to properly take care of your instruments to extend their lifespan.

Although Surgical Stainless Steel is corrosive resistant, it can still rust or stain if handled improperly. Under unfavorable conditions instruments may oxidize because Surgical Stainless Steel that is exposed to physical, thermal, or chemical manipulations may lose some of its stainless properties.

SCISSORS, BONE INSTRUMENTS, KNIVES & SCALPELS

Clipper

For microscopic dissections of soft and mucous tissue. The minute fineness of the blades allows clear visualization of the tissue being dissected.

Uses:

- Removing sheath of ganglia to access neurons in aplysia.
- Cutting single nerve axons in aplysia, mollusk and snail.
- Stripping fascia off arteries and muscles.
- Ultra fine brain tissue dissection.
- Cutting of minute fiber optic strands.

Obsidian Stone Age Scalpels

For applications where extremely fine cuts are required or for studies where trace metals from ordinary scalpel blades cannot be tolerated. These ultra fine cutting edges have been used in human surgical procedures where objectionable scar tissue results from the use of standard scalpels. The blade is made from obsidian — a type of volcanic glass — which allows a much finer blade than is possible with the conventional steel blade. In some cases this makes the relatively inexpensive obsidian scalpel a suitable substitute for an expensive diamond knife. Patterned after “stone age” knives which first made their appearance about 18,000 years ago, these modern versions utilize hard wood and plastic dowels for handles. Plastic dowels are made of polyoxymethylene.

Obsidian is a very fragile material. Great care should be taken to not exert any lateral pressure on the blade during cutting. Each blade is hand-fashioned, so sizes, shapes and points will vary. While all the blades will have at least one sharp edge, some will have two.

Dumont Medical Standard

The sides of these forceps are distinctively ribbed to provide a better holding surface for maximum control of the instrument. The shanks are arched toward each other to transmit more holding strength to the points. The smooth inside surfaces at the tips will close flat to 5 mm with gentle pressure, increasing the total holding area considerably. The microscopically matched tips are gently blunted to prevent tissue puncture and are recommended as micro needle holders.

Multipurpose Forceps

Balanced instruments are designed to put the center of gravity between the thumb and index finger. This is accomplished by adding a slight counter weight to the proximal end of the instruments. The design enhances tactile feel, aiding in better control and precision.

The tips of these multipurpose forceps are configured to enable their use as dilators at the front, as well as needle holders and tying forceps further in the back. The platform at the tips close parallel ensuring a reliable grip.

MICRO CLAMPS

Clamp Size and Clamp Pressure

Clamp pressure is determined by the closing force of the clamp (in grams), divided by the area of the vessel wall that is compressed between the jaws (in square millimeters). Thus, the smaller the vessel, the higher the pressure exerted.

Despite the wide range of closing forces, the pressure exerted by each clamp, big or small, remains consistent throughout the series. Each size of clamp exerts a pressure of 5 g/mm² when used on the largest vessel in its range, and 15 g/mm² when used on the smallest vessel. Even at the higher range, S&T®'s micro clamps have the gentlest working pressure of any small vessel clamp available.

Clamp (ea)	L x W (mm)	Vessel Diameter Range (mm)
00396-01 & 18040-11	3.5 x 1.0	0.4 - 1.0 • ○
00398-02 & 18040-22	5.5 x 1.5	0.6 - 1.5 ○ ○
00400-03 & 18040-33	7.5 x 1.75	1.0 - 2.25 ○ ○

Vascular Occluders

Applications

- Fast, dependable zero-flow baseline determination in blood flow studies.
- Partial to full occlusion of vessels for circulation research studies.
- Prolonged implantations, such as chronic blood flow studies.
- Constriction of soft organs in acute or chronic applications.

Operation instruction

1. Apply the occluder cuff around the exposed blood vessel. Secure it in place with suture material through the eyelets.
2. Occlude the vessel to the desired degree by inflating the diaphragm with air or liquid injected into the actuating tube using a syringe and blunt needle. Clamp the tubing to maintain occlusion of the vessel over time.
3. To deflate, simply withdraw the air or liquid.

The actuating tube length is 90 cm and measures 0.76 mm ID x 1.6 mm OD. Detailed instructions are included.

A: Lumen diameter
B: Cuff width
C: Cuff thickness

VO-1.5 N

A: 1.5 mm - B: < 3.5 mm - C: 1.5 mm

No. 18080-01

VO-2

A: 2 mm - B: 5 mm - C: 1.5 mm

No. 18080-02

VO-3

A: 3 mm - B: 5 mm - C: 1.5 mm

No. 18080-03

Benefits

- Occlusion is accomplished without traction on vessels or surrounding tissues.
- The actuating tube may be exteriorized from the occlusion site for remote actuation.
- Performance during implantations is reliable and consistent.
- Easily maintained: can be autoclaved or cold sterilized.
- Made from soft, flexible 100% silicone rubber.
- Fully operational with instant response using air, liquids, or inert gases.

Selection

The lumen diameter when deflated is usually the determining factor in the selection of the proper device. Select the occluder size that provides a slightly loose fit around the subject vessel. The cuff width and thickness will vary, depending on models and sizes.

V-Hook

Aids in feeding fine suture around blood vessels, works very similar to ligation aids.

Micro Cannulation System

This micro cannula is most helpful for quick and easy insertion in arteries and veins. It can be used as an “indwelling” catheter during long term experiments. With care, thorough rinsing and sterilization, it can be reused several times. Detailed instructions are included.

Features

- Biocompatible Teflon® tubing.
- Cannula size 0.33 mm OD – 0.16 mm ID
- A pointed Surgical Stainless Steel stylus (trocar), to aid in vascular penetration and allow a maximum range of cannula manipulation during insertion.
- Contoured tip for easy insertion, fitted with shoulder for “tie-in” to prevent accidental removal.
- Female luer connection for linkage to infusion lines.

1 Approach

Cannulation Forceps (Item No. 18403-11) and Spinal Cord Hook (Item No. 10162-12) aid in the insertion process.

2 Insertion

Remove trocar and advance cannula.

3 Secure

Use shoulder hub and suture to “tie in” cannula to prevent accidental removal.

Instruments sold separately.

8 cm

Cannula size: 0.33 mm OD - 0.16 mm ID

No. 18000-10

Tubing Introducer Forceps

These vessel cannulation forceps are useful whenever a fine plastic tube has to be introduced into a small blood vessel of almost equal size. The hollowed jaws hold the tubing securely without deforming it. The tip of the tubing is directed exactly into the vessel opening without damage to the vessel from unwanted movement.

Double Pronged Hook

For peritoneum, pleura, endocardium, organ capsules and skin. Grasps lifts skin, tissue and dura etc.

Magnified View

The tip consists of two very sharp, nearly horizontally opposed points. By applying gentle downward pressure and twisting slightly in a clockwise fashion, the points will embed themselves horizontally into fine membranes or skin etc., so that it may be lifted upward. This instrument also has been used successfully when separating fine tissue from an underlying area that is not to be cut.

Round-Handled Micro/Macro

These Round-Handled Needle Holders have a dual-purpose and can be used for microscopic and macroscopic applications. The fine tapered tips can be used to handle small needles up to 0.2 mm in diameter. While the remaining portion of the tip ensures a secure hold for larger needles. The balanced design improves control and stability, while the ergonomic handle enhances grip and reduces hand strain.

WOUND CLOSURE

Microsurgical Needles with Suture Thread Attached

The combination of proprietary needle design technology and state-of-the-art manufacturing techniques has enabled FST® to provide a microsurgical needle that is unmatched in the industry. FST microsurgical needles provide frictionless tissue penetration. They are inspected under the microscope at critical stages during the manufacturing process, and a multi-point final inspection of each suture and needle combination ensures a high quality product.

The suture-to-needle attachment is tested to higher standards than the USP specifications.

Features:

- Needle and thread combination comprising of nonabsorbable black nylon polyamide monofilament thread and Surgical Stainless Steel 3/8 circle needle. Nylon is suitable for closing ophthalmic, neurological and microvascular wounds.
- 3/8 circle precision taper point. Surgical Stainless Steel needle honed under microscope by hand. Superfine round tip with flattened body to improve stability in needle holder. Easy penetration. Precise stitch placement.
- Grinding geometry and suture needle attachment are directed toward frictionless tissue penetration.
- Each needle suture combination is individually packed and sealed in a peel-open blister pack.

Magnetic Fixator Retraction System

This Small Animal Retraction System simplifies set-up procedure and provides the examiner with an excellent overview of the operative site. It consists of three components: Base Plate (Nos. 18200-03 & 18200-04); Fixators (Nos. 18200-01 & 18200-02); and Retractors (Nos. 18200-05 through 18200-12).

The Base Plates are made from magnetic Stainless Steel and are available in two sizes. The surface is nonreflective and both plates have a window in the center which allows the animal contact with body temperature control systems. The window sizes are 10 x 13 cm for the small base plate and 15 x 25 cm for the large.

The Fixators are movable anchors made from anodized aluminum with a surgical grade rare earth magnet in the base for attachment anywhere on the Base Plate. The magnets do not interfere with lab electronics and can be used in close proximity (3 cm) to ferro-magnetic items. They incorporate pushbutton-activated spring locks that grip either the Wire or Elastomer Retractors.

The Retractors are interchangeable Retractor Tips (Nos. 18200-08 through 18200-12) which attach to either Retractor Wire (Nos. 18200-05 & 18200-06) for static retraction or to Elastomer (No. 18200-07) for dynamic retraction. The Retractor Tips are light and atraumatic to delicate tissue or membrane.

All items are autoclavable, except for the elastomers.

Kit for animals up to 200 g

Includes:

- 1 Small base plate (No. 18200-03)
- 2 Short fixators (No. 18200-01)

GenoPunch

The interchangeable GenoPunch aids in the fast and simple collection of the 2 mm tissue sample for DNA analysis and/or genotyping. FST® Exclusive Item. **Autoclavable.**

**Microtubes
not included.**

GenoPunch includes:

- 1 GenoPunch
- 1 0.5 ml tube holder
- 1 1.6 ml tube holder
- 1 Screwdriver
- 4 Screws

FST does not supply microtubes.

11.5 cm
Surgical Stainless Steel (Inox)
and anodized aluminum
Punch Ø: 2 mm

No. 24215-02

The Ear Puncher relieves stress on the wrist during ID marking as it requires only a very gentle pressure to cut a hole. The Stainless Steel puncher has a sloped edge that provides a cut rather than a punch, which minimizes discomfort. The ear puncher should be lubricated to improve longevity. **Autoclavable.**

Marking Pen

The Marking Pen was developed for easy, long lasting identification of laboratory animals. The markers contain no harmful chemicals and instead nontoxic pigment approved by the Japanese Ministry of Health for use in food, drugs and cosmetics. It is intended for use on the fur rather than the skin and will last for 6-12 weeks.

Color can stain skin and clothing. The use of gloves and lab coats is recommended. These colors will not work on black fur.

Skin Marker

This marker features a versatile tip for precise fine (0.2 mm) line marking, or when held at an angle, a broad (2 mm) line marking. The marker's violet ink is nontoxic, non-tattooing and surgical prep-resistant.

Markings can be removed from the skin with isopropyl alcohol. A six-inch ruler calibrated in both centimeters and inches is included.

Self Piercing Ear Tags

Ideal for use in small animals such as mice and rats, these ear tags come numbered from 1-100 or 1-500. Silver colored tags with black numbers provide high visibility making them easy to read. Once applied, tags seal and cannot be removed, providing an easy to use, permanent identification method. These ear tags are safe for use in salt water.

Fine Forceps Repair Kit

Realign and repair fine forceps with this convenient kit. Bent forceps tips can be re-straightened with the chain nose pliers. The sharpening stone has two grooves, 1.6 mm and 0.8 mm, to assist in reshaping the forceps tips. O-rings clamp the forceps shut to ensure that both shanks are equally aligned and sharpened. Instrument oil assists in producing a smooth sharp edge. Detailed instructions are included.

Kit includes:

- 1 Sharpening stone for fine forceps (No. 29008-22)
- 10 O-rings (11200-00)
- 1 Oil bottle, 50 ml (No. 29055-00)
- 1 Chain nose pliers

No. 29000-00

O-Rings for Forceps

These rubber O-rings fit our forceps and keep them closed with variable degrees of pressure on the tips.

Pkg. of 10

Self Sealing Sterilization Pouches

Preformed pouches with self adhering tape are blue tinted on one side for visualization of contents and paper-backed on the other side. Pouches will work with either steam autoclave or ethylene oxide sterilization.

Material properties:

- Protects instruments during sterilization.
- Provides sterile storage until use.
- Write on pouches for easier identification during sterilization.

HOT BEAD STERILIZERS

Hot Bead Sterilizer

The sterilizer provides a safe, effective and convenient method for sterilizing your surgical instruments prior to and during surgery or tissue culture. Without using potentially dangerous gases flames or chemicals, you can ensure that your instruments will be free of pathogens and microbial contaminants.

The beads take 15–20 minutes to reach 240 °C to 270 °C (464 °F to 518 °F), then the sterilizer is ready for use. The temperature is thermostatically maintained and the unit can be left on all day. Instruments require approximately 20 seconds of contact with the beads for complete sterilization. The sterilizer is safe to use even in laminar flow hoods.

Sterilization test results conducted by the Pasteur Institute in Lille, France, are available upon request. Available in 110 V and 220 V. CE Certified and UL Approved.

Sterilizer includes:

- Sterilizer unit
- 1 Bag of glass beads
- 1 Dust cover for well
- 1 Small heat-tempered glass dish for small objects

Autoclave Tape

Tape will permanently indicate diagonal stripes after exposure to steam autoclave temperature between 121 °C and 130 °C during a 40 - 60 minute time period. Use with sterilization pouches, sterilization wraps and sterilization cases.

The tape can be used in:

- Gravity sterilizers operating at 121 °C (+3 °C) for 30 minutes or
- Pre-vacuum sterilizers operating at 132 °C (+3 °C) for 4 minutes and 135 °C (+3 °C) for 3 minutes
- Shelf life/durability is 36 months

Disposable Sterilization Wraps

These biodegradable cellulose fiber wraps are resistant to tears and conform easily to maintain a breathable yet impervious barrier to airborne bacteria, saline, blood and water. Wrapping your instrument case securely will ensure the sterility of your instruments until ready for use. Available in two sizes.

FST® STUDENT LINE

FEATURES:

- Economy
- Quantity discounts
- Quality
- Less hand finishing
- Less expensive alloys

One of the hallmarks of FST has always been to accurately assess the needs of our customers. We gather information not only from the lab, but from conferences, journals and researchers. Whether it is designing new tools or finding new applications for existing instruments, we believe our best information comes directly from you.

Our customers wanted reduced costs and quantity discounts without sacrificing the precision and quality inherent in German instruments. To meet their needs, we have developed a full line of “student” instruments. They were created for use in the classroom where students are learning proper instrument care.

Unlike our competitors, the quality of these instruments does not drop dramatically with the price. Our student line uses quality Surgical Stainless Steel and maintains the precision you expect from FST. In addition they carry our unconditional satisfaction guarantee while being offered at a significantly reduced price.

Not intended as a substitute for our highest quality instruments, the student line may require extra care as the alloys used are more susceptible to corrosion. Visit our website at **finescience.com** for more information.

Vannas

Ideal for introductory courses in microdissection. The manufacturer, material and general pattern are the same as our No. 15003-08 but with much of the costly hand finishing omitted.

YOUR NOTES

製品情報

記載されております写真は実物大です。（ただし、一部縮小・拡大されております）

Forceps

- **Tip Size**（チップサイズ）・・・各ピンセットの先端の幅×厚みを記載しています。
- **Dumont Tips**（先端部）
 - Dumont's Finest Tips・・・#5SF：11252-00、#5：11254-20、#7：11274-20が最精密モデルです。
 - Biology（バイオロジー）・・・生物科学実験に適した精密ピンセット。Standardの1/2の細かさです。
 - Standard（スタンダード）・・・顕微鏡下での精密作業様に作られています。
- **Dumont Alloys**（合金の種類）
 - Carbon（カーボン）・・・硬く、酷使に耐えられます。非常に錆び易く磁気を帯びます。
 - Dumostar（デュモスター）・・・最も防錆性、耐摩耗性、非磁性に優れ金属疲労に強く500℃迄の高温に耐えられます。
 - Inox（イノックス）・・・カーボンスチールにクロムを加え耐蝕性を高めたもの。硬度はやや損なわれます。
 - Dumoxel（デュモクセル）・・・ステンレスチールの中で最高級の材質で、十分な硬度を有し最も人気のある材質です。磁化されません。
 - Titanium（チタニウム）・・・Inoxほど硬度はないが防錆、柔軟性にすぐれ、軽量で指が疲れにくく使いやすい材質です。100%磁化されず、430℃の高温に耐えられます。
- ★ **Hardness**（硬度）・・・Carbon > Dumostar > Inox > Dumoxel > Titaniumの順です。

Scissors

- **ToughCut**（タフカット）皮膚を切る場合に適した刃を備えています。一方は鋸状刃で皮膚を逃さず、もう片方の鋭いカミソリ刃でスムーズにカット出来る為、普通のハサミより手が疲れません。
- **Tungsten Carbide**
（タングステンカーバイド）合金の中でも特に硬度のある炭化タングステンを作業面に使用したことにより、耐久性に優れており、ステンレスチール製品と比較して、約2倍長持ちします。
